

**Amendments to the Specification:**

Please replace the paragraph beginning on line 20 of page 1 and ending on line 29 of page 1 with the following paragraph:

One drawback of assigning multiple functions to input elements is that users may be required to remember how the functions of each input element change during the ~~coarse~~ course of device operation. A solution to this is to devote a region of the display to remind the user what functions are currently assigned to input elements. Accordingly, the display may include, for example, a bottom line stating, "Press F2 to save, F3 to exit." Devoting a region of the display to list input element assignments, however, decreases the amount of room available on the display for non-control information.
